

Data Collection Complete: Sept. 14th – Sept 16th (lunch and dinner rush)

App + Interview Completion: Sept. 21st

Report Completion: Sept. 23rd

Completed + Submitted: Monday, Sept 23rd

Project due date: Tuesday, Sept 24th

Responsibilities:

Bianca	-Develop the App - Use MIT App inventor(https://appinventor.mit.edu/) - Conduct interviews for app - Develop (or redesign) and test a prototype of a human-computer interface app to minimize customer wait times and to increase customer satisfaction with the service.
Nina	- Write the Report - Provide overall recommendations for the processes of this service system. How will introducing the app ordering system change the physical work system and the processes in the system? E.g., How will it change the space requirements of processes, material and customer flow through the system and overall service times? Based on the results, determine if the app is a good investment. Use engineering economy principles to support your recommendation.
Nick	- Data Collection + App Building Support - Collect and explain data to deliver results -HTA - Design interface and layout of new facility

	- Evaluate the service system in terms of customer arrival rates, employee staffing, line wait times, service times, and types of orders. Determine or make assumptions about the types of and combinations of orders made by customers to estimate service times.
Olivia	- Data Collection + Writing Report Support - Collect and explain data to deliver results - HTA - Create charts and explain analysis on final report - Evaluate the service system in terms of customer arrival rates, employee staffing, line wait times, service times, and types of orders. Determine or make assumptions about the types of and combinations of orders made by customers to estimate service times.
